SUPPLIER INFORMATION:
Safety and handling equipment, gas cylinders and refills, personal protection equipment, fire extinguishers, cylinder services, respirators, etc. are available at Stoody Industrial and Welding Supply, Inc. Our main location is at 3316 National Avenue, (near the 32nd Street Naval Base) in San Diego California 92113. Call 1-619-234-6750 or visit our web site, stoodyind.com stoodyind.com for more information.

DISCLAIMER: The information contained herein is accurate to the best of our knowledge. Stoody Industry and Welding Supply Inc. does not assume any responsibility or liability for user’s reliance or consequences of reliance on the information provided in this SDS. Stoody industrial and Welding Supply, Inc. makes no warranty or guarantee of any kind, expressed or implied, concerning the safe use of this material in your process or in combination with other substances.

‘STOODY INDUSTRIAL AND WELDING SUPPLY, INC.’ is not sponsored, affiliated or in any way related to ‘STOODY COMPANY’, a division of ‘Victor Technologies’.
ACTYLENE, Dissolved Gas

1 IDENTIFICATION

1(a) Product identifier used on label: Acetylene, dissolved gas
1(b) Other means of identification: C2H2, Ethyne, Ethine, welding gas, acetylene Grade B, acetylene Atomic Grade A, UN 1001
1(c) Recommended use of the chemical and restrictions on use:
Recommended use: welding, cutting, heating, brazing, and soldering
Restriction on use: NONE
1(d) Name, address, and telephone number of the chemical manufacturer, importer, or other responsible party
Chemical Manufacturer: STOODY INDUSTRIAL AND WELDING SUPPLY, INC
3316 National Avenue
San Diego, CA 92113
619-234-6750
1(e) Emergency phone number
Professional Emergency Resource Services: 800-633-8253
Military Emergency Resource: 800-851-8061

2 HAZARD(S) IDENTIFICATION

2(a) Classification of chemical in accordance with paragraph (d) of §1910.1200
Flammable

2(b) Signal word, hazard statement(s), symbol(s) and precautionary statement(s) in accordance with paragraph (f) of §1910.1200

<table>
<thead>
<tr>
<th>Signal Word</th>
<th>Hazard Statement(s)</th>
<th>Symbol(s)</th>
<th>Precautionary Statements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger</td>
<td>(H280) Contains Gases under Pressure; may explode if heated. (H220) Extremely flammable gas.</td>
<td><img src="image" alt="Dissolved Gas" /></td>
<td>(General P210) Keep away from heat/sparks/open flames/hot surfaces. - No smoking. (Reaction P377 + P381) Leaking gas fire: Do not extinguish, unless leak can be stopped safely. Eliminate all ignition sources if safe to do so. (P410 + P403) Protect from sunlight. Store in a well ventilated place.</td>
</tr>
</tbody>
</table>

2(c) Describe any hazard not otherwise classified that have been identified during the classification process

- Acetylene is a lighter than air gas. It may escape past closure seals that are air-tight and accumulated in inadequately vented storage spaces.
- By-products generated in use, such as welding and flame cutting, may generate hazardous fumes and gases.
- Large amount of potential energy resulting from compression of the gas makes the cylinder a potential rocket or fragmentation bomb.

2(d) Where an ingredient with unknown acute toxicity is used in a mixture at a concentration = 1% and the mixture is not classified based on testing of the mixture as a whole, a statement that X% of the mixture consist of ingredient(s) of unknown acute toxicity is required.
Acetylene CAS No. 74-86-2 consists of 0% of unknown acute toxicity.

3 COMPOSITION / INFORMATION ON INGREDIENTS

3(a) Chemical name; C2H2
3(b) Common name; Acetylene, dissolved
3(c) CAS number and other unique identifiers;
   - CAS Number: 74-86-2
   - Other unique identifiers: UN 1001
3(d) Impurities and stabilizing additives which are themselves classified and which contribute to the classification of the substance.
   Acetone, C₆H₁₂O (CAS No. 67-64-1), itself extremely flammable, is internally utilized within acetylene cylinders; both filled and empty, to stabilize acetylene for safe storage and shipment.

4 FIRST-AID MEASURES

4(a) Description of necessary measures, subdivided according to the different routes of exposure, i.e., inhalation, skin and eye contact, and ingestion:

<table>
<thead>
<tr>
<th>ROUTES OF EXPOSURE (UNDER NORMAL CONDITIONS) (yes or no)</th>
</tr>
</thead>
<tbody>
<tr>
<td>INHALATION: Yes</td>
</tr>
<tr>
<td>Effects: Asphyxiation</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>RAPIDLY EXPANDING STATE ROUTES OF EXPOSURE (yes or no)</th>
</tr>
</thead>
<tbody>
<tr>
<td>INHALATION: Yes</td>
</tr>
<tr>
<td>Effects: Asphyxiation</td>
</tr>
</tbody>
</table>

Continued on next page
4 FIRST-AID MEASURES (continued from page 1)

FIRST-AID: No action shall be taken involving any personal risk or without suitable training.
Inhalation (asphyxiation); persons suffering from lack of oxygen should be removed to fresh air. If victim is not breathing, administer artificial respiration. Obtain prompt medical attention.
Skin frostbite; flush with lukewarm water, and obtain immediate medical attention. DO NOT RUB EFFECTED AREA.
Eye frostbite; flush eyes with cool water for 15 minutes and obtain immediate medical attention.
Ingestion; unlikely route of exposure.

5 FIRE-FIGHTING MEASURES

5(a) Suitable (and unsuitable) extinguishing media
Combat fire from sheltered position.
Do not use high volume water jet extinguishing media.
Do not extinguish gas flame unless leak can be stopped safely, then only if absolutely necessary.
Extinguish any other fire. Use extinguishing media as appropriate, e.g., dry chemical, CO₂, water spray or fog.
Flood cylinders with water from a maximum distance to keep them cool until they can be moved from fire area, if you can do it without risk.

5(b) Specific hazards arising from the chemical (e.g., nature of any hazardous combustion products).
Pressure in a cylinder can build due to nearby fire heat and may rupture if pressure relief devices should fail to function. The pressure relief devices are designed to vent contents when exposed to elevated temperatures.
If flames are coming from the cylinder valve allow them to burn out. Accidently extinguished flames can explosively re-ignite.
Self-contained breathing apparatus (SCBA) may be required for rescue workers.
Damaged cylinders should be handled only by specialists.

6 ACCIDENTAL RELEASE MEASURES

6(a) Personal precautions, protective equipment, emergency procedures.
Never enter a confined space or other area where the concentration is greater than (0.025%) 10% of Lower Explosion Level (LEL).
Escaping acetylene gas vapor mixed with air is explosive. See 10(d)
Reduce gas vapor with fog or fine water spray. Remove all sources of ignition and evacuate all personnel from the affected area. Shut off leak source only when it can be done safely.

6(b) Method and materials for containment and cleaning up.
Use water spray to reduce or divert vapor cloud drift. Isolate area until gas has dissipated and been determined safe. Before entering area you must check for flammable or oxygen-deficient atmospheres (a normal flammable gas detector is not suited for the purpose). Flammable limits in air by volume: Lower Explosion Level (LEL) = 2.5%; Upper Explosion Level (UEL) = 100% above 15 PSIG.

7 HANDLING AND STORAGE

7(a) Precautions for safe handling.
• Cylinders containing acetylene shall never be stored on their side. • Do Not Use Above 15psi Delivery Pressure • Acetylene and air mixture is explosive. • Keep away from heat, sparks and open flame. • Use only spark-proof tools and explosion-proof equipment.
• All piped acetylene systems and associated electrical equipment must be grounded. • Do not crack or open cylinder valves unless it is connected for use.
For “Additional Precautions in using acetylene” see Section 16 - Other Information.

7(b) Conditions for safe storage, including any incompatibilities.

<table>
<thead>
<tr>
<th>Conditions for safe storage</th>
<th>Incompatibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Store and use with adequate ventilation.</td>
<td>Zinc; oxygen &amp; other oxidizing agents such as halogens</td>
</tr>
<tr>
<td>2. Cylinders should be stored upright with valve protection cap in place and firmly secured to prevent falling or being knocked over.</td>
<td>Forms explosive acetylide compounds with copper, mercury, silver &amp; brasses (containing more than 66% copper).</td>
</tr>
<tr>
<td>3. Protect cylinders from physical damage; do not drag, roll, slide or drop.</td>
<td></td>
</tr>
<tr>
<td>4. Full cylinders should be segregated from empty cylinders.</td>
<td></td>
</tr>
<tr>
<td>5. Do not allow storage area temperature to exceed 125°F (52°C).</td>
<td></td>
</tr>
<tr>
<td>6. Use a first-in, first-out inventory system to prevent full containers from being stored for long periods of time.</td>
<td></td>
</tr>
<tr>
<td>7. Use a suitable hand truck for cylinder movement.</td>
<td></td>
</tr>
<tr>
<td>8. Never attempt to lift a cylinder by its valve protection cap.</td>
<td></td>
</tr>
<tr>
<td>9. Keep cylinders and their valves free from oil and grease.</td>
<td></td>
</tr>
<tr>
<td>10. Never insert an object (e.g., wrench, screwdriver, pry bar, etc.) into valve cap openings. Doing so may damage valve, causing a leak to occur.</td>
<td></td>
</tr>
</tbody>
</table>

Specific requirements are listed in NFPA 50A. Cylinder storage locations should be well-protected, well-ventilated, dry, and separated from combustible materials. Cylinders should never knowingly be allowed to reach a temperature exceeding 125°F (52°C).
8 EXPOSURE CONTROLS / PERSONAL PROTECTION

8(a) OSHA permissible exposure limit (PEL). American Conference of Governments Industrial Hygienists (ACGIH) Threshold Limits Value (TLV), and any other exposure limit used or recommended by the chemical manufacturer, importer, or employer preparing the safety data sheet, where available.

OSHA Permissible Exposure Limit (PEL): OSHA does not have a PEL for acetylene. In confined spaces, oxygen content should be at least 19.5%.

Maritime: 29 CFR 1915.1000 Table Z - Shipyards -- Simple asphyxiants. Simple asphyxiants. The limiting factor is the available oxygen which shall be at least 18 percent and be within the requirements addressing explosion in subpart B of part 1915.

American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Value (TLV): Simple Asphyxiant

Note: Acetone (CAS No. 67-64-1) has a TLV-TWA of 500ppm; TLV-STEL of 750 ppm, (ACGIH, 2014). OSHA PEL, 1000 ppm (2400 mg/m³).

8(b) Appropriate engineering controls.

Provide natural or explosion-proof ventilation adequate to ensure acetylene does not reach its lower explosive limit of 2.5%.

8(c) Individual protection measures, such as personal protective equipment.

- Safety glasses/goggles, work gloves (gloves must be clean and free of oil or grease) recommended.
- Safety shoes are recommended when handling cylinders.
- When possible wear cotton clothing to prevent possible electro-static discharge.
- Any self-contained breathing apparatus that has a full face piece and is operated in a pressure-demand or other positive-pressure mode, as appropriate for the exposure environment.

9 PHYSICAL and CHEMICAL PROPERTIES

| a) Appearance (physical state, color, etc.) | Colorless Gas |
| b) Odor | garlic-like |
| c) Odor threshold | Not applicable |
| d) pH | Not applicable |
| e) Melting point/freezing point | -119° F (-83.88° C) (Sublimes) |
| f) Initial boiling point | Sublimes |
| g) Flash point | Flammable gas |
| h) Evaporation rate | Not applicable |
| i) Flammability (solid, gas) | Flammable (gas) |
| j) Upper/lower flammability or explosive limits | LEL = 2.5%; UEL = 100% |
| k) Vapor pressure | 4460 kPa @ 68° F (20° C) |
| l) Vapor density | 0.07314 lb/ft³ (1.1716 kPa/m³) @ 32° F (0° C) and 1 atm |
| m) Relative density | 0.91 (air = 1) |
| n) Solubility(ies) | 0.12 g/100 ml @ 68° F (20° C), in water |
| o) Partition coefficient: n-octanol/water | 0.37 (log Pow) |
| p) Auto-ignition temperature | 581° F (305° C) |
| q) Decomposition temperature | Not available |
| r) Viscosity | 0.010 cP @ 68° F (20° C) |

10 STABILITY and REACTIVITY

10(a) Reactivity

Fire or explosion may

10(b) Chemical stability

Pure acetylene is unstable. Can decompose spontaneously if pressure exceeds 15 PSIG. For transport and storage acetylene is stabilized (in dissolved acetone) in an acetylene cylinder containing the acetone.

10(c) Possibility of hazardous reactions

See 10(a)

May react violently result from use at elevated temperatures and pressure or from use with incompatible materials.

10(d) Conditions to avoid (e.g., static discharge, shock, or vibration)

Pilot light flame, an electrical heater, an electrical switch spark, static discharge, tool strike spark, and ignition sources at distances away from the release point can cause combustion.

10(f) Incompatible materials

(See 10(a).

Zinc; oxygen & other oxidizing agents such as halogens

10(g) Hazardous decomposition products

Oxides of carbon
11 TOXICOLOGICAL INFORMATION

Description of the various toxicological (health) effects and available data used to identify those effects, including:

11(a) Information on likely routes of exposure (inhalation, ingestion, skin and eye contact);
Acetylene can be absorbed into the body by Inhalation. Target organ: Central Nervous System.

11(b) Symptoms related to the physical, chemical and toxicological characteristics;
Dizziness, unconsciousness, asphyxia; skin severe frostbite/burns, eye frostbite (on contact with liquid).

11(c) Delayed and immediate effects and also chronic effects from short- and long-term exposure;
Short-term effects: Suffocation.

11(d) Numerical measures of toxicity (such as acute toxicity estimates);
No identifiable acute toxicity.

11(e) Whether the hazardous chemical is listed in the International Toxicology Program (NTP) Report on Carcinogenic (latest edition) or has been found to be a potential carcinogenic in the International Agency for Research on Cancer (IARC) Monographs (latest edition), or by OSHA.
Acetylene is not listed as a carcinogenic or potential carcinogenic by NTP, OSHA or IARC.

12 ECOLOGICAL INFORMATION

12(a) Ecotoxicity (aquatic and terrestrial, where available)
This product does not contain ecotoxicological properties, aquatic or terrestrial.

12(b) Persistence and degradability
No adverse information found.

12(c) Bioaccumulative potential
This product does not have a bioaccumulative potential.

12(d) Mobility in soil
No adverse information found.

12(e) Other adverse effects (such as hazardous to the ozone layer)
No adverse ecological effects are expected. Acetylene does not contain any Class I or Class II ozone depleting chemicals (40 CFR Part 82). Acetylene is not listed as a marine pollutant by DOT (49 CFR Part 171).

13 DISPOSAL CONSIDERATIONS

13(a) Description of waste residue and information on their safe handling and method of disposal, including the disposal of any contaminated packaging,
Do not attempt to dispose of cylinder or its contents. Cylinder(s) and unused contents should be returned to supplier for disposal in accordance with appropriate Federal, State, local regulation.

Related Information (European Waste Code, EWC 16 05 04): Do not discharge into areas where there is a risk of forming an explosive mixture with air. Waste gas should be flared through a suitable burner with a flash back arrestor. Do not discharge into any place where accumulation could be dangerous.

Residual product within process system may be vented at a controlled rate, to the atmosphere through a vent stack that discharges to an elevated point. This vent stack should be in an isolated area away from ignition sources.

14 TRANSPORTATION INFORMATION

14(a) UN number: UN 10001
14(b) UN proper shipping name: Acetylene, dissolved
14(c) Transportation hazard class(es): 2.1
14(d) Packing group, if applicable: Product is not listed
14(e) Environmental hazards (e.g.,) Marine pollutant (yes/No): No
14(f) Transport in bulk (according to Annex II of MARPOL 73/78 and IBC Code):
Product does not fall under purview of cited regulations.

14(g) Special precautions which a user needs to be aware of, or needs to comply with, in connection with transport or conveyance either within or outside of their premises:
Cylinders should be properly separated from non-compatible gas cylinders and transported in an upright secure position, in a well ventilated vehicle. The transportation of compressed gas cylinders in automobiles or in closed-body vehicles can present serious safety hazards and should be discouraged.
15(a) Safety, health and environmental regulations specific for the product in question.

User(s) of this product are solely responsible for regulatory compliance on a federal, state, and local level.

**U.S. FEDERAL REGULATIONS:**

**EPA - ENVIRONMENTAL PROTECTION AGENCY**

40 CFR PART 68, Risk Management for Chemical Accidental Release, does not list Acetylene as a regulated substance in quantities less than 10,000 lb (4536 kg). Facilities that manufacture, use, store or otherwise handle quantities 10,000 lbs or greater that are required to develop and implement risk management programs.

**CERCLA:** Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (40 CFR Parts 117 and 302):

- **Reportable Quantity (RQ):** None

**SARA:** Superfund Amendment and Reauthorization Act

**SECTION 302/304:** Requires emergency planning on threshold planning quantities (TPQ) and release reporting based on reportable quantities (RQ) of EPA's extremely hazardous substances (40 CFR Part 355).
- **Extremely Hazardous Substances:** None
- **Threshold Planning Quantity (TPQ):** None

**SECTIONS 311/312:** Require submission of safety data sheets (SDSs) and chemical inventory reporting with identification of EPA defined hazard classes (40 CFR Part 370). The hazard classes for this product are:

- **IMMEDIATE:** No
- **PRESSURE:** Yes
- **DELAYED:** No
- **REACTIVITY:** Yes
- **FIRE:** Yes

**TSCA:** Toxic Substance Control Act: Acetylene is listed on the TSCA inventory.

**OSHA - OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION:**

- **29 CFR 1910.119, Appendix A,** does not list Acetylene as a highly hazardous chemical.
- **No adverse ecological effects are expected.** Acetylene does not contain any Class I or Class II ozone depleting chemicals (40 CFR Part 82).
- **Acetylene is not listed as a marine pollutant by DOT (49 CFR Part 171).**
- **Shipments of compressed gas cylinders which have not been filled with the owner's consent is a violation of Federal law (49 CFR Part 173.301 (b)).**

**CALIFORNIA PROPOSITION 65 (Safe Drinking Water and Toxic Enforcement Act of 1986):** Acetylene is not listed.

**CANADIAN REGULATIONS:**

- **WHIMIS Classification:** A - Compressed gas; B1 - Flammable and combustible material - Flammable gas
- **WHIMIS Health Effects Criteria Met by this Chemical:** Does not meet criteria.
- **WHIMIS Ingredient Disclosure List:** Not included. Meets criteria for disclosure at 1% or greater.
- **Note:** “The Canadian supplier / Canadian importer has the legal responsibility to assess their products against the criteria set out in the Controlled Products Regulations.”

16(a) OTHER INFORMATION, Including date of preparation or last revision

**16 OTHER INFORMATION:**

**Never rely on the color of the cylinder for identification.** (Colors may vary with suppliers.)

**Additional Precautions in Using Acetylene:**

1. Post “No Smoking or Open Flames” signs in storage and use areas. (There must be no source of ignition.
2. NEVER lay acetylene cylinders on their side. In the event that an acetylene cylinder has been lying on its side, stand it upright for 1 hours before using.
3. Acetylene cylinder valve should only be opened enough to indicate pressure on the regulator gauge (not more than ¼ to 1 ½ turns) so that the valve can be closed quickly in emergency situations. Opening too little may provide insufficient pressure and lead to a Backflash.
4. Use piping and equipment adequately designed to withstand pressures to be encountered.
5. Use a check valve or other protective apparatus in any line or piping from the cylinder to prevent reverse flow.
6. Install valve protective cap firmly in place by hand when the cylinder is not in use.
7. A cylinder should never be emptied to a pressure lower than 172 kPa (25 psi/in2) (the residual contents may become contaminated if the valve is left open
8. Close cylinder valve after each use even when empty.
9. Under no circumstances should any attempt be made to repair a cylinder or valve.
10. Check all connections with a soap solution for leaks, never check for leaks with using an open flame.
NFPA RATINGS and OSHA Classification:

HEALTH-Blue: = 0   FLAMMABILITY-Red: = 4   INSTABILITY-Yellow: = 3   SPECIAL HAZARDS*-White: =

LEGEND: 0-4 – 0-least hazardous; 4-most hazardous

*OX (Oxidizers), W (Water reactive), SA (Simple Asphyxiants), (blank if no special hazard)

STANDARD VALVE CONNECTIONS FOR U.S. AND CANADA:

CGA-510 L.H. Female (Standard)
CGA-200 R.H. Male (10 cf)
CGA-520 R.H. Male (49 cf)

Further information pertaining to acetylene and its use can be found in pamphlets published by Compressed Gas Association Inc. (CGA), 1725 Jefferson Davis Highway, Suite 1004, Arlington, VA 22202-4102. Telephone: (703)412-0900.

SUPPLIER INFORMATION:

Safety and handling equipment, gas cylinders and refills, personal protection equipment, fire extinguishers, cylinder services, respirators, etc. are available at Stoody Industrial and Welding Supply, Inc. Our main location is at 3316 National Avenue, (near the 32nd Street Naval Base) in San Diego California 92113. Call 1-619-234-6750 or visit our web site, stoodyind.com for more information.
