NOZZLE CLEANER

Open position
Part No. AT-NRC
\$13.22 EA

This handy mig nozzle reamer/cleaner uses expanding spring steel blades to quickly remove splatter. By inserting the tool into mig nozzle and turning, you will be assured of unrestricted gas flow and cleaner, stronger welds. There is no need to wait for the nozzle to cool before cleaning. Self adjusting to fit all nozzle sizes.

Mig-It Welding Shield

The Welding Wave of the Future

Mig-it is a high quality polycarbonate lens which meets OSHA and 1989 ANSI Z87.1 standards and specifications. **Mig-it** lenses are available in shade10.

This revolutionary safety device protects the operator by significantly decreasing sparks and spatter while minimizing contact to the body, face, and arms. The **Mig-it** provides ultraviolet eye protection when placed between the welding arc and the eyes.

It has a universal, extendible plastic neck, each link detachable, with a full range of motion, enabling the operator to quickly adjust the device for a multitude of welding applications.

CAUTION

The operator must wear Safety Glasses/Goggles while welding, as with any welding operation, as required by OSHA standards. We **STRONGLY RECOMMEND** that welders use **SAFETY GLASSES/GOGGLES** meeting specifications that provide peripheral protection from infra red radiation as well as ultra violet protection recommended by OSHA standards. Most safety glasses/goggles meet this requirement (See Fig. 1).

Part No. MIG-IT
\$57.07 EA

The Mig-it shield:

- ❖ Easily attaches to all Mig welders and plasma guns
- ❖ Has a Versatile range of motion
- ❖ Minimizes heat and splatter
- ❖ Lens meets OSHA and Z87.1 standards
