Z89.1 - 2003

American National Standard for Head Protection The new standard was approved in July 2003 and continues to cover requirements for two types of impact-resistant helmets:

Impact Performance

1. TYPE I (Top Impact)

Helmets intended to reduce the force of an impact to the top of a wearer's head.

2. TYPE II (Top and Lateral Impact)

Helmets intended to reduce the force of an impact, resulting from a blow received, off-center or to the top of a wearer's head. The new standard's performance requirements for Type I and Type II helmets are equivalent to those specified in the 1998 revision.

Electrical Performance

1. CLASS E (Electrical)

Helmets intended to reduce the danger of exposure to high-voltage electrical conductors, proof-tested at 20,000 volts.

2. CLASS G (General)

Helmets intended to reduce the danger of exposure to low-voltage electrical conductors, proof-tested at 2,000 volts

3. CLASS C (Conductive)

Helmets not intended to provide protection from electrical conductors.

The electrical performance requirements in the new 2003 standard are identical to those in the 1997 standard.

HEAD TURNERS SAFETY CAPS

Not recommended for use with welding helmets.

American Eagle
#0740-5908
